PHOTOGRAPHERS' FORMULARY

FORMULARY WARM TONE PAPER DEVELOPER 106

Directions for mixing and using FORMULARY WARM TONE PAPER DEVELOPER 106: kit sizes, 1/2 liter (Catalog number 02-0050); 1 liter; (Catalog number 02-0060); and 2 liters (Catalog number 02-0061)

DEVELOPER 106, equivalent to Edwal 106, is a glycin-hydroquinone based developer that produces brown tones. FORMULARY DEVELOPER 106 is a specialty, not a general-purpose developer. A popular use for DEVELOPER 106 is the reproduction of old photos. A negative of the old photo is made using modern materials then printed on Ektalure paper using DEVELOPER 106. Such a reproduction often has tones that match the original photo.

The print results using DEVELOPER 106 depend both on the printing paper and the dilution used to make the working solution. Only the slower chlorobromide papers, such as Opal or Ektalure, are suitable. When a cold toned paper, such as Kodabromide, Ilforbrom, or Brovira, no warming of the print will be noticeable. When a chlorobromide paper is used, the print color will range from a warm black to an engraving brown depending upon the dilution of the stock solution.

CHEMICAL SAFETY

All chemicals are dangerous and must be treated with respect. Please read the chemical warnings on each package of chemical.

None of the chemicals used in mixing DEVELOPER 106 need special attention. However, IF FOR ANY REASON YOU DO NOT WISH TO ASSUME ALL RISKS, PLEASE RETURN THE CHEMICALS FOR A FULL REFUND.

Please consult with local sewer and water authorities regarding proper disposal of darkroom chemicals in your area.

MIXING THE STOCK SOLUTION

You will need one brown bottle of a 1/2-liter (1 liter or 2 liters) size for mixing and storage of the stock solution.

Kit Size

Chemical	1/2 liter	1 liter	2 liter
Distilled water (at 52°C/125°F)	375 ml	750 ml	1500 ml
Sodium sulfite	42.5 g	85g	170g
Sodium carbonate, monohydrate	85 g	170 g	340 g
Glycin	14 g	28 g	56 g
Hydroquinone	4.5 g	9 g	18 g
Potassium bromide	2 g	4 g	8 g
Distilled water to make	500 ml	1000 ml	2000 ml

Place the warm water in the container and add the solid sodium sulfite in one portion. Stir (or cap and shake the container) until the sulfite has dissolved. Be sure the entire solid has gone into solution before proceeding.

Add the sodium carbonate, and again mix the solution to dissolve the solid. As before, be sure the entire solid has gone into solution before adding the next chemical. The glycin is added next. After the glycin has dissolved, then add the hydroquinone. Hydroquinone often dissolves slowly so be sure all of it is in solution before adding the potassium bromide. The speed at which potassium bromide dissolves depends on its crystal size; the large crystals dissolve slower. If you wish, the solution can stand at this point until the potassium bromide dissolves. Finally add 125 ml (or 250 or 500 ml) of water. The temperature of this final portion of water is not important but be sure to shake (or stir) the mixture to obtain a homogenous stock solution.

LIFE OF THE SOLUTION

In a closed bottle, DEVELOPER 106 should last more than six weeks. Unlike other developers, the color of solution cannot be used to determine its activity. The development of a test strip is the only sure method to determine if the solution is still active.

USING THE DEVELOPER

FORMULARY DEVELOPER 106 is usually diluted 1:7 with water to make the working solution (125 ml of stock solution, 875 ml of water to make the working solution). Development times are 2-3 minutes at 20°C/68°F.

Greater dilution produces warmer tones. DEVELOPER 106 can be diluted 1:15 (60 ml of stock solution, 900 ml of, water to make 960 ml of working solution). With higher dilution, print exposure will have to be increased and longer development times (5-8 minutes) will be required at 20°C/68°F.

5. FIRE-FIGHTING MEASURES

Suitable extinguishing media: Dry chemical, CO_2 , sand, earth, water spray or regular foam Consult with local fire authorities before attempting large scale fire fighting operations.

Specific hazards arising from the chemical

Hazardous combustion products: These products include: Carbon oxides Nitrogen oxides
Other specific hazards: Closed containers may explode from heat of a fire.

Special precautions for fire-fighters:
Use water spray or fog; do not use straight streams. Dike fire-control water for later disposal; do not scatter the material. Containers may explode when heated. Move containers from fire area if you can do it without risk.
Special protective equipment for fire-fighters:
Wear positive pressure self-contained breathing apparatus (SCBA). Structural fire fighters' protective clothing provides limited protection in fire situations ONLY; it may not be effective in spill situations. Wear chemical protective clothing which is specifically recommended by the manufacturer. It may provide little or no thermal protection.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions: Avoid contact with skin, eyes, and clothing. Keep people away from and upwind of spill/leak. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing (Section 8). Warn unnecessary personnel to move away. Stop leak if you can do it without risk. Ensure adequate ventilation. Isolate the hazard area and deny entry to unnecessary and unprotected personnel.

Personal protective equipment: Wear eye protection (splash goggles) and face protection (full length face shield). Lab coat. Dust respirator. Be sure to use a MSHA/NIOSH approved respirator or equivalent. Wear protective gloves (nitrile).

Emergency procedures: Prevent dust cloud. In case of a spill and/or a leak, always shut off any sources of ignition, ventilate the area, and excercise caution. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Warn personnel to move away. Prevent entry into sewers, basements or confined areas; dike if needed.

Methods and materials for containment and cleaning up:
ELIMINATE all ignition sources (no smoking, flares, sparks, or flames in immediate area). Stop leak if without risk. Ventilate the area. Absorb with an inert material and put the spilled material in an appropriate waste disposal container. Use clean non-sparking tools to collect absorbed material.
Environmental precautions:
Prevent further leakage or spillage if safe to do so. Water runoff can cause environmental damage. Prevent entry into sewers, basements or confined areas; dike if needed.

7. HANDLING AND STORAGE

Precautions for safe handling: Avoid inhalation of vapor or mist. Avoid contact with skin and eyes. Good general ventilation should be sufficient to control airborne levels. Keep container dry. Handle and open container with care. Wear suitable protective clothing, gloves and eye/face protection. When using do not eat, drink, or smoke. Keep away from sources of ignition.

Conditions for safe storage: Keep only in the original container in a cool well-ventilated place. Keep away from incompatibles. Containers which are opened must be carefully resealed and kept upright to prevent leakage. Avoid prolonged storage periods. Store under inert gas (e.g. Argon).

Storage incompatibilities: Store away from oxidizing agents
