SPECTRAL SENSITIVITY

EMAKS

EMAKS EMAKS PE

EMAKS and **EMAKS PE** belong to the group of chlorobromide photographic papers used for making enlargements. With shorter exposures they can also be used for contact copying. They are characterized by a pleasant warm tone, deep blacks and rich transitions of tones in both light and dark places.

These papers should be developed in usual developers for photographic papers. For all their features, **EMAKS** and **EMAKS PE** photographic papers are particularly suitable for art photography as they meet all demands of modern photography. **EMAKS** is produced on baryta coated double weight (K) and single weight (P) support. On K support the emulsion layer is coated on four types of surfaces: glossy, mat, silk and crystal. On P support **EMAKS** is produced only on glossy surface.

EMAKS PE is produced on resin coated white medium weight support on three types of surface: glossy, mat and crystal. This paper is very suitable for photographs intended to be exhibited in open air or unprotected places.

EMAKS and **EMAKS PE** photographic papers are produced in 3 contrast grades: special (1), normal (2) and hard (3).

Chart of the assortment of **EMAKS** photographic papers

Support	Support designation	Surface	Contrast grade
K - double weight	K 888	glossy	Gradation 1 (special) Gradation 2 (normal) Gradation 3 (hard)
	K 883	mat	
	K 885	silk	
	K 881	crystal	
P - single weight	P 888	glossy	

Designation examples:
