Inkjet Digital Fine Art Papers for Fine Art and Photographic Printing

The Innova Fine Art collection represents a range of matte papers specially coated for use with water based (Aqueous) inkjet printers. The extensive selection of weights and surface textures enables the artist to bring out the best in their imagery by matching the paper to their style of work.

These digital fine art papers have been coated with formulations created by own team of chemists and provide consistent colour reproduction and wide gamut, whilst still maintaining the look and feel of true artists papers.

Each material has been specifically developed with the artist in mind, suitable for giclée printing, applications include limited or open editions, restoration, exhibition prints and more.

Traditional techniques, such as watercolour, etching, pastel and charcoal drawings, and acyclic painting can be accurately reproduced on

a surface similar to the original artwork. Textures range from super smooth to cold press rough textured and include both bright white and natural white base tones.

Printmaking Rag 310gsm IFA 107

This 100% cotton mould made digital fine art paper is compatible with both pigment and dye aqueous inkjet printers.

Featuring a soft grain matte surface, the natural white tone gives your fine art prints a traditional feel. An OBA, acid and lignin free base provides the highest archival quality so prints will last for generations. With the feel of media used by the old masters, it is ideal for producing reproductions of original artworks, such as etchings or charcoal drawings.
